Daniel Martynovich

Aspiring data analyst with SQL/PostgreSQL experience in data modeling, validation, and quality checks.
B.S. Computer Science (Rutgers), MS/MBA Data Science in progress.

732-570-3783 | Mountain Top, PA | danmartynovich@gmail.com

EDUCATION

Rutgers University – New Brunswick | B.S. Computer Science, Minor in Mathematics | Aug 2025

- Relevant Coursework: Information and Data Management (SQL), Data Structures, Machine Learning, Intermediate Statistical Analysis, Software Methodology

Eastern University | MS/MBA Data Science (in progress) | Expected Aug 2027

- Relevant Coursework: Machine Learning Models (Python), Database Management with SQL, Data Analytics in R, Data Manipulation (Python, Pandas), Natural Language Processing

Certifications: Udemy SQL Bootcamp

TECHNICAL SKILLS

- **Databases & SQL**: SQL (PostgreSQL), Data Modeling, Schema Design, Stored Functions, Views
- **Data Analysis**: Python (Pandas, NumPy), R (Tidyverse), Regression, Data Validation, Anomaly Detection
- **Programming**: Java, Dart, TypeScript, JavaScript, Crystal
- **Tools & Platforms**: Supabase, Git, Flutter, Deno, Firebase, Redis, VS Code

PROFESSIONAL EXPERIENCE

DataAnnotation | *AI Trainer - Coding | Jul 2025 – Present*

- Completed 120+ hours of AI model evaluation, testing code and math responses for correctness across Python, Java, SQL, R, and Dart, plus calculus, statistics, and linear algebra.
- Wrote original prompts and grading rubrics to measure model accuracy, reasoning quality, and code correctness.

Nomo SC LLC | *Co-Founder and Co-Developer | Sep 2023 – Oct 2024*

Social networking app for discovering local events, coordinating availability, and connecting with friends and groups; published on the iOS App Store; paused after beta testing (Flutter, Supabase).

- Designed a Supabase (PostgreSQL) schema of ~16 tables and 6 views supporting events, availability scheduling, friend networks, group chat, and messaging for ~30 beta testers.
- Wrote 7 PostgreSQL functions powering event search, profile search, and interest-based event recommendations.
- Built 8 TypeScript/Deno edge functions that trigger in-app and Firebase push notifications for messages, friend requests, event updates, and group activity.
- Co-developed a ~20,000-line Flutter/Dart client with one co-founder, tracing data flows between front end and backend to fix sync and performance issues.

PROJECTS

HR Analytics: Salary & Attrition Models / *Python, scikit-learn | DTSC-670 Course Project | Summer 2026*

- Built end-to-end scikit-learn pipelines on a 1,470-employee HR dataset, including custom transformers that engineered a career-tenure ratio and a composite satisfaction score.
- Predicted monthly income with a tuned Lasso model ($R^2 = 0.87$, RMSE ≈ $1,690 on held-out data), selected over linear regression, Ridge, and SVR through 3-fold cross-validation.
- Predicted attrition with tuned gradient boosting (87% accuracy, 0.85 weighted F1), then found it caught only 23% of actual leavers and recommended recall-weighted metrics before deployment.

Idle Cosmos | *Collaborative Side Project / Oct 2024 – Jan 2025*

- Built game logic in Crystal for a multiplayer idle game with 30+ power-ups and achievements as part of a 3-person team.
- Used BigFloat arithmetic to keep exact precision for in-game values over 50 digits long, beyond what standard 64-bit floats represent accurately.

LANGUAGES & INTERESTS

- **Languages:** English (fluent), Russian (conversational)
- **Interests:** data architecture, powerlifting & fitness analytics, swimming, physics, and space
